

RGB-112Q

Raised Flower Garden

MANSFIELD

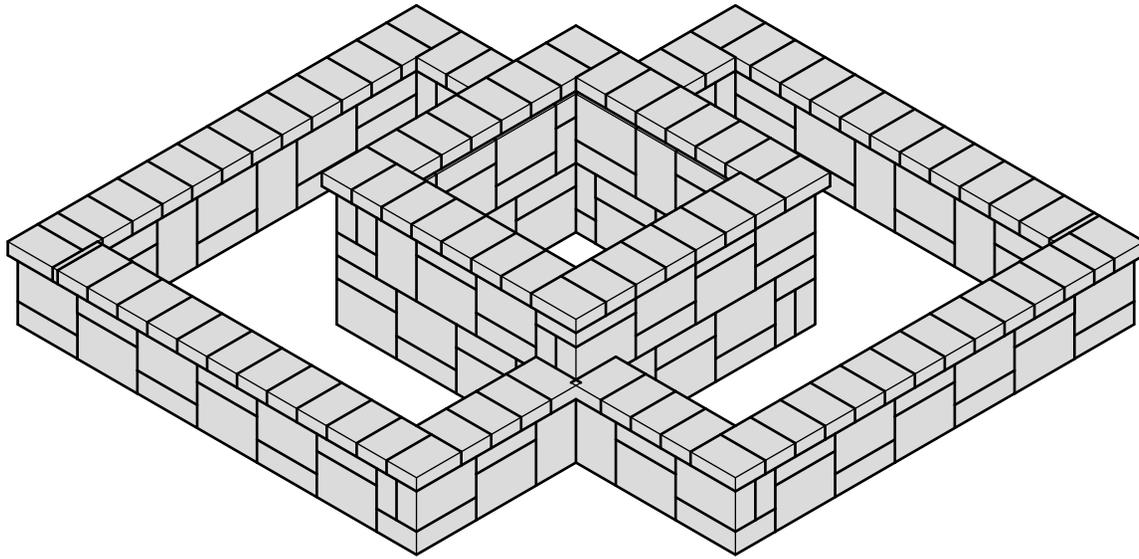

Dakota Stone™

Step by step instructions for assembling RGB-112Q on a prepared surface/base.

**BUILD WITH
DAKOTA**

All sizes in this document are approximate.

This set of instructions assumes you are building on a level grade on a level foundation.

Materials Needed:

- 180 Dakota Stone™ (4x8x12)
- 99 6x9 Ledge Rock (36sf)
- 6 Tubes Adhesive

Tools Needed:

- Dead Blow Hammer
- Caulk Gun
- 4 Foot Level
- Torpedo Level
- Square

When constructing your project, be sure to keep all blocks level, square, and plumb. Use a four foot level and check often. Starting on a level foundation is key. When gluing blocks together, be sure not to use too much adhesive - this will cause the blocks to "swim." A small bead is ideal.

INFO

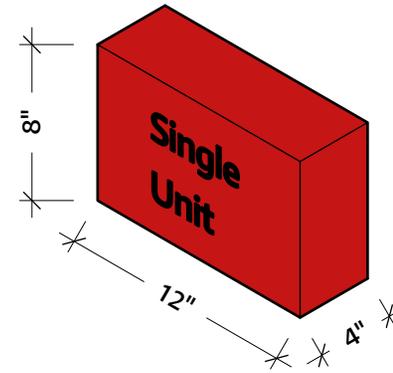

All sizes in this document are approximate.

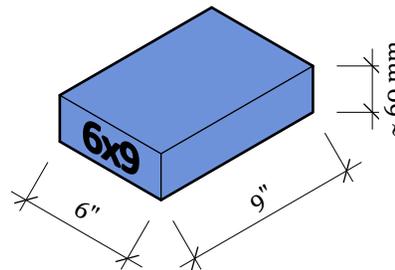

The "Square Foot Unit." consists of three block as shown. By rotating this unit (SFU) we are able to build quickly and easily while keeping bond lines broken up. These will always be shown in a tan color.

Sometimes SFUs are broken up or can't be used. The Double Unit is the next preferred unit. Double Units are grouped for strength and speed in construction. They are always represented in green.

The Single Unit is the basis for all the construction, of course. When used in a single or non-standard configuration, you will see Dakota Stone™ depicted in red.

6" x 9" Ledge Rock paver. Great to use as a small cap. Always shown in light blue.

KEY1

Any time you see a block with just the wide top showing, fret not, it is a Square Foot Unit (SFU). The unit is just turned where the that is the only block you see.

This is the "foundation" on which you will build your Raised Flower Garden. Take time to make sure it is as perfect as possible. Be sure this course is level and square. Any mistakes made here will continue to show up as you build.

When constructing your project, be sure to keep all blocks level, square, and plumb. Use a four foot level and check often. Starting on a level foundation is key. When gluing blocks together, be sure not to use too much adhesive - this will cause the blocks to "swim." A small bead is ideal.

02

The cap stones are the trickiest part. Be sure to lay them out before gluing them. You will want to pay extra attention when installing the cap. Be sure to keep the sides straight, and the corners square.

Cut a paver or two as needed to maintain a straight cap with proper overhang.

Cut a paver or two as needed to maintain a straight cap with proper overhang.

Notice the inside corners. The corners of the two starting caps overlap. Just find four pavers with heavily tumbled corners. Use those four pavers for these inside starts. Otherwise, just chip the corner with a hammer.

When constructing your project, be sure to keep all blocks level, square, and plumb. Use a four foot level and check often. Starting on a level foundation is key. When gluing blocks together, be sure not to use too much adhesive - this will cause the blocks to "swim." A small bead is ideal.
