

BENEFITS OF WATER FEATURES

Quality Family Time

Enhanced landscaping improves property value, and water features make your property stand out from the rest. A Pondless® Waterfall in the front yard provides curb appeal, while a backyard Ecosystem Pond increases a home's value much like a deck, patio, or gazebo. The sound of a water feature will drown out noise from traffic or neighbors. In addition, water features provide an interesting backdrop for entertaining while adding aesthetic appeal to your landscape. Waterfront property is a prized commodity and you can easily incorporate water into your outdoor living space without having to move near a lake or ocean.

Health and Wellness

Water features provide soothing sights and sounds that help you relax and de-stress in today's busy world. Lower your blood pressure and improve your physical and mental health as you prop your feet up and enjoy the therapeutic effects of Mother Nature.

Environmental Conservation

Environmental sustainability has taken center stage in today's world, and water plays an important role as the world's greatest resource. An Ecosystem Pond is self-sustaining with very little maintenance. Although it takes many gallons of water to fill initially, over the long haul it requires less water than the expanse of lawn it replaced. Water features attract wildlife of all kinds, from birds to butterflies, to frogs and salamanders. Certified wildlife habitats are growing in popularity, and water is one of the elements required to achieve certification. Water gardening becomes your new hobby as you feel yourself drawn to its beauty and natural elements.

A pond provides opportunity to have fish as pets, without the mess and maintenance of an aquarium. Aquatic plants give you the chance to broaden your gardening horizons with choices that go beyond the standard petunia and rose. In addition, bird lovers will delight in the new variety of feathered friends that flock to a water feature. Nature lovers simply can't go wrong with water features.

Outdoor living space

Most people think of outdoor grills and patio furniture when they think of outdoor living spaces. Once the outdoor meal is over, what more is there to do in your backyard? While many homeowners turn to pools or hot tubs, they're discouraged by the amount of maintenance and chemicals required with these amenities. For the price of a hot tub, a beautiful Ecosystem Pond can be installed, and less maintenance is required thereby providing more time to relax and enjoy friends and family. An Ecosystem Pond maintains clarity and quality of water through a balance of fish, plants, aeration, and filtration, often eliminating the need for chemicals. In northern climates, outdoor grills and similar features are typically enjoyed during the warmer months, whereas a water feature can be enjoyed year-round.
