Breakdown of Project Expenses

Rosetta Material List

		Approximate Cost
• Grand Flagstone	4 pallets	_____
• Belvedere Wall	2 pallets	_____
• Belvedere Corners	2 pallets	_____
• Dimensional Coping	3 sections	_____
• 30" Formal Column Caps	2 pieces	_____
• Round Fire Pit Kit	1 kit	_____

Minimum Bedding Materials

• Sub-base aggregate	7 cubic yards	_____
• Bedding Sand	1 ½ cubic yards	_____

Other Materials

• Landscape Adhesive	6 cartridges	_____
• Polymeric Sand	3 bags	_____

Labor Cost

• Daily Labor Cost _____ x _____ days	_____
---------------------------------------	-------

Total estimated project cost

These reference materials detail one of many practical ways to create a beautiful outdoor living space with Rosetta Hardscapes' line of natural looking wall and patio stones. This document is intended as a supplement to the Rosetta Technical Guide, which contains detailed installation instructions for all Rosetta products. Get one from your local Rosetta dealer, or download the Technical Guide at www.rosettahardscapes.com.

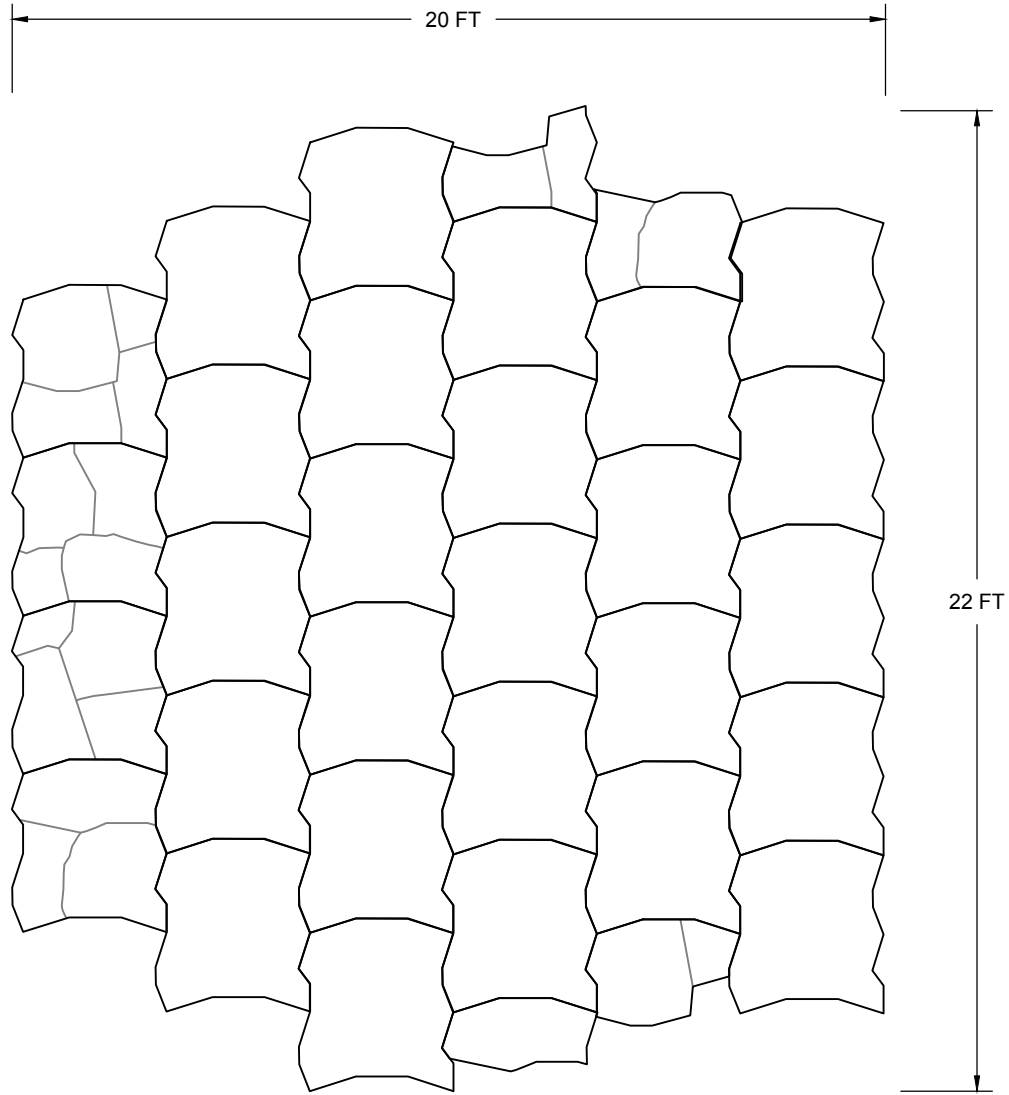

- Excavate a 20-ft x 22-ft area. Prepare a paver base as detailed in the Rosetta Technical Guide. Keep in mind during excavation that in the finished installation, the top of the Grand Flagstone will be a minimum of 8¼-inches above the lowest point of the excavated area.
- Once the base has been prepared, lay the Grand Flagstone in layers, as shown in *Diagram 1*.
- Once the Grand Flagstone is laid out, locate the center of the patio. From this center point, use a string and a carpenter's pencil draw two circles, one with a radius of 9-ft, the other with a radius of 2-ft, 4½-in, as shown in *Diagram 2*. These will be the outside circumference of the Grand Flagstone, and the circumference of the Round Fire Pit, respectively.
- Once the circles have been marked, trim the Grand Flagstone along the pencil line using a gas-powered cut-off saw with a diamond-coated concrete blade. A hand-grinder or smaller saw may be required to trim the smaller Round Fire Pit circle.
- Remove the trimmed flagstone pieces. If large or unused pieces remain, they can be used as informal stepping stone paths leading to or from the patio.
- Prepare the freestanding Belvedere Wall base along the perimeter of the patio, as detailed in the Rosetta Technical Guide. The finished freestanding wall will span 24-ft.
- Build the freestanding Belvedere Wall as shown in *Diagram 3*. Be sure to use landscape block adhesive between all courses of block.
- Build the Belvedere Columns at the ends of the freestanding wall. The Grand Flagstone will have to be trimmed to accommodate the base of the Column (appx. 24" x 7½" sections).
- Install Dimensional Coping across the top of the freestanding Belvedere Wall. See *Diagram 3* for approximate trimmed dimensions of the coping pieces to make the correct radius atop the wall. Begin with a finished end piece, and after that, alternate between long and short pieces to complete the radius. Check the pieces as you go to ensure that the radius is correct. The final finished end piece may need to be trimmed to a custom length. The coping will overhang the front and back of the wall by approximately 1¼"-in.
- Place column caps atop the Belvedere columns.
- Install the Round Firepit as detailed in the Rosetta Technical Guide.
- Secure the exposed perimeter of the Grand Flagstone with a low-profile paver edging. A minimum of one stake should be used for every two feet of paver edging (min. 18 stakes).
- Sweep the patio of dust and debris. Install a jointing material such as paver sand or polymeric sand. Grade topsoil or other finish media to the secured edge of the Grand Flagstone. Plant grass, sod or landscape plants as desired.
- Congratulations! You have just created a beautiful and functional outdoor living area. We hope that you have enjoyed the Rosetta experience, and have experienced the sense of pride in a job well done!
